

Guidance for Preventing Tube/Catheter Slippage

Created in 2003.09
Revised in 2020.09
Reviewed in 2021.01
English version in 2021.01

- I 、 Please fix the position of the inserted tube/catheter according to the way the medical staff teaches you, do not adjust or move by yourself.
- II 、 Fix the tube/catheter properly and firmly. When changing posture or activities, please pay attention to the tube on your body at all times to avoid twisting, pulling and compressing.
- III 、 If the patient is confused and unable to cooperate or has experience in self-extraction of the tube/catheter, it will be appropriate to restrain the patient.
- IV 、 If the tube/catheter fixation is loose, please inform the nurse immediately.
- V 、 The device tubing causes discomfort. Please keep an eye on the patient's emotional fluctuation to prevent the patient from unplugging the tubing.
- VI 、 Please choose to wear loose-fitting clothes. Be careful when wearing the clothes to avoid the tube/catheter being pulled by the buttons on the clothes.
- VII 、 Keep the dressing dry. Also in order to fix the tape (applique), do not apply lotion to the skin around the injection spot and the tube/catheter
